

# Now, get a better charge with current technology.

## INTRODUCING

**AMETEK**<sup>®</sup>

# ULTRA POWER<sup>™</sup>

NICKEL STRIP

At **AMETEK** Specialty Metal Products, our high purity nickel strip can be formed, welded, soldered or plated better than traditional melt and cast materials.

As a result, the tabs, terminals and contacts that you produce for rechargeable batteries will out-perform competing materials, making them ideal for use in computers, cellular phones, pagers, camcorders, power tools and electric vehicles.

Our high purity nickel strip, made by wrought Powder Metallurgy technology, offers major advantages to rechargeable battery production, including:

- ⚡ The highest degree of electrical conductivity available in a nickel strip.
- ⚡ Improved weldability through consistency, micro-cleanliness and close chemistry controls.

⚡ Excellent solderability and reduced die wear resulting from low levels of surface oxides.

⚡ Excellent and consistent formability for all applications.

Whether your rechargeable batteries are made of Lithium Polymer, Lithium Ion, Nickel Metal Hydride or Nickel Cadmium, our superior wrought powder metallurgy technology, customized packaging, quick delivery times and comprehensive technical assistance can power you to new heights.
